DETAILED ACTION

Information Disclosure Statement

1) The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609.04(a) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Prior art reference recited in the Specification (see Pg. 2, line 12), SE 516999 is not listed on form PTO-1449 and a copy of the foreign reference is not provided for review.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 1791

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2) Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eichel (6,266,437). Eichel discloses a system and method for sequential detection of web defects. The system includes an imaging system camera and an illumination system light above the moving web, an image analysis system computer in communication with the imaging system. Image analysis is developed to calculate variance in pixel values and to calculate the variances in the pixels. Any differences would have been obvious over the cited prior art.

3) Claim 9 is rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Eichel. Eichel discloses a system for sequential detection of web defects. The system includes an imaging system camera and an illumination system light above the moving web, an image analysis system computer in communication with the imaging system. Image analysis is developed to calculate variance in pixel values and to calculate the variances in the pixels. Any structural differences are minor and would have been obvious over the cited prior art.
